

## Customer Journey Map

**Team Leader:** Gayathri A &nbsp;&nbsp;  **Members:** Srinivasan E, Saravanavel V

| Journey Stage        | Actions                                                                            | Touchpoint                     | Customer Thought / Feeling           | Process Ownership         | Improvement Opportunity                          |
|----------------------|------------------------------------------------------------------------------------|--------------------------------|--------------------------------------|---------------------------|--------------------------------------------------|
| 1. Identify need     | Student encounters a difficult topic or study task                                 | EduGenie web page              | "I need help now."                   | Student / Frontend        | Provide clear feature choices                    |
| 2. Enter request     | Student selects Q&A, explain, summarize, quiz, or learning path and enters content | Input form / REST endpoint     | "I hope this gives a useful answer." | Frontend + FastAPI        | Validate input and show useful guidance          |
| 3. AI processing     | Request is routed to feature module and Gemini service                             | FastAPI + Gemini Service Layer | "How long will this take?"           | Backend + AI service      | Use model discovery/fallback and graceful errors |
| 4. Receive result    | Student reads explanation, summary, quiz, or roadmap                               | Results interface              | "Now I understand / can practice."   | Feature module + Frontend | Use structured, readable output                  |
| 5. Continue learning | Student asks another question or repeats practice                                  | Web interface                  | "I can continue from here."          | Student                   | Future: accounts and progress tracking           |
